Trois (INAF/OA-Cagliari), I. Donnarumma (ASI), F. Longo (Univ. Trieste and INFN Trieste), A. Giuliani (INAF/IASF-Mi), report on behalf of the AGILE Team:

The AGILE Mini-CALorimeter (MCAL) detected a burst at $T_0 = 2019-01-17$ 14:36:49.01 $\pm$ 0.01 s (UTC).

In the 0.4–100 MeV energy range, the event lasted about 0.6 s and released a total number of ~ 530 counts in the detector, above an average background rate of 540 counts / s.

The GRB is clearly detected also by the AGILE scientific ratemeters: in particular, by the Super-AGILE (20–60 keV), Anti-Coincidence (50–200 keV), and MCAL (0.4–100 MeV) ratemeters.

Further analysis is still in progress.

The AGILE-MCAL detector has a full solid angle acceptance, and is operational in the range 0.4 – 100 MeV.
