**METIS INSTRUMENT
for the
Solar Orbiter Mission**

**Technical Note
METIS On Board Data Processing Description**

Principal Investigator:

Ester Antonucci
INAF – Astrophysical Observatory of Turin, Torino, Italy

and the METIS Consortium:

CNR - Institute for Photonics and Nanotechnology, Padova, Italy
CNRS – IAS, France
INAF – IASF, IFSI, OACN, OACt, OAPa, OATo, OATs, Italy
Institute of Astronomy- Czech Academy of Science, Czech Republic
Laboratoire d'Astrophysique de Marseille, France,
Max-Planck-Institute für Sonnensystemforschung, Germany
Naval Research Laboratory, USA
Politecnico of Torino, Italy
Universities of Firenze, Padova, Pavia, Italy
University of Athens, Greece

prepared by METIS Team

Book captain: G. Nicolini

approved by G. Naletto – Experiment Manager

Table of Contents

1	INTRODUCTION.....	7
1.1	Scope.....	7
2	SCIENTIFIC OBSERVING MODES	8
3	IMAGE/DATA PROCESSING ALGORITHMS	12
3.1	Overview	12
3.2	Visible Light channel	12
3.2.1	VL scientific measurements	12
3.2.1.1	Acceptance, reordering and masking of the incoming data stream	13
3.2.1.2	Cosmic Ray/Solar Energetic Particle Removal.....	14
3.2.1.3	CME Flag computation	15
3.2.1.4	Averaging.....	17
3.2.1.5	Image statistics	18
3.2.1.6	TC Parameters configuring the VL acquisition and processing flow	18
3.2.1.7	TM parameters produced by the data processing.....	18
3.2.2	VL engineering measurements	18
3.2.2.1	Temporal noise frame	19
3.3	Ultraviolet channel.....	19
3.3.1	UV scientific measurements (Analog Mode).....	22
3.3.2	UV scientific measurements (Photon Counting Mode).....	22
3.3.3	Photon Counting Unit Overview.....	22
3.3.3.1	PCU I/O	23
3.3.3.2	UVDA → PCU Signals.....	23
3.3.3.3	MPPU → PCU Signals	24
3.3.3.4	PCU → MPPU Signals	24
3.3.3.5	Offset correction	25
3.3.3.6	3x3 Window generation	25
3.3.3.7	Photon Event Detection.....	26
3.3.3.8	Output Buffer	27
3.3.3.9	Output Data: Photon counting mode/photon list.....	27
3.3.3.10	Output Data: Photon counting mode/accumulation	28
3.3.4	UVD images calibrations and detector performances monitoring.....	28
3.4	VL and UV images compression algorithm, digital masking, image re-mapping and radial binning.....	28
3.4.1	Background	28
3.4.1	Compression algorithm	30
3.5	Flags generation and reaction.....	31
3.5.1	Event manager and flags on the VL channel	31
3.5.2	Event manager and flags on the UV channel.....	31
3.5.3	Flags broadcasting and reception	32
3.5.4	METIS CMEs detection flag contents.....	32
3.5.5	External flags reception.....	32
3.5.5.1	EUI “EUV-flare” flag reception	32
3.5.5.2	EUI “Off-limb filament” flag reception	32
3.5.5.3	STIX “X-ray” flag reception	32

4	DOCUMENT REFERENCES	33

Figure 14 - The selected compression algorithm operating steps.	29
Figure 15 - Residuals are computed as difference between the original pixel value and the predicted one.	29

LIST OF TABLES

Table 1 – Acquisition times relationships	8
Table 2 – METIS Observing Modes and most relevant parameters.	10
Table 3 – METIS Calibration Mode and most relevant parameters.	11
Table 4 – METIS Diagnostic Mode and most relevant parameters.	11
Table 5: Preliminary list of TC parameters regulating the VL channel data acquisition	18
Table 6 - Channel link Interface bit assignment [2].....	23

1 Introduction

1.1 Scope

This document describes the scientific data processing algorithms running on VL and UV images collected by the METIS Processing and Power Unit (MPPU), as primary scientific products of the METIS instrument observations. Digital image processing is exclusively performed inside the MPPU at HW and SW levels as no digital processing is foreseen on board the front end electronics of the VLDA and the UVDA.

This document does not provide any requirement, only a technical description of what specified in [AD-1].
