TITLE: GCN CIRCULAR
NUMBER: 24933
SUBJECT: LIGO/Virgo S190630ag: No counterpart candidates in AGILE-MCAL observations
DATE: 19/07/01 09:35:58 GMT
FROM: Alessandro Ursi at INAF/IAPS <alessandro.ursi@gmail.com>

C. Pittori (SSDC, and INAF/OAR), A. Ursi (INAF/IAPS), M. Tavani (INAF/IAPS, and Univ. Roma Tor Vergata), M. Cardillo, C. Casentini, G. Piano (INAF/IAPS), F. Lucarelli, F. Verrecchia (SSDC, and INAF/OAR), A. Bulgarelli, V. Fioretti, N. Parmiggiani (INAF/OAS-Bologna), M. Pilia (INAF/OA-Cagliari), F. Longo (Univ. Trieste, and INFN Trieste), report on behalf of the AGILE Team:

In response to the LIGO/Virgo GW event S190630ag at T0 = 2019-06-30 18:52:05 (UT), a preliminary analysis of the AGILE minicalorimeter (MCAL) triggered data found no event candidates within a time interval covering ± 15 sec from the LIGO/Virgo T0.

At the T0, about 60% of the S190630ag 90% c.l. localization region was accessible to the AGILE MCAL. Three-sigma upper limits (ULs) are obtained for a 1 s integration time at different celestial positions within the accessible S190630ag localization region, from a minimum of $1.6\text{E-}06$ erg cm^{-2} to a maximum of $7.4\text{E-}06$ erg cm^{-2} (assuming as spectral model a single power law with photon index 1.5).

The AGILE-MCAL detector is a CsI detector with a 4π FoV, sensitive in the energy range 0.4-100 MeV. Additional analysis of AGILE data is in progress.
